Q: Magento cannot access protected data of parent theme I am running Magento 1.9.2.2 (latest stable version at the time of writing) on a CentOS 7 box. I recently deployed my website using Git and I updated the Magento version in the app/etc/config.php file. A week or so later, I realized the website was not loading properly, and I discovered that a different (but similar) website was in charge of displaying the theme. I found the root of the problem and fixed it by deleting the core_config_data table in the database. While this is a good fix, I have a question regarding this particular problem: How can I find out which module in the parent theme was trying to access the protected config data for the child theme? I think that in order to figure this out, I need to know the name of the module that was trying to access the config data.

A: Found the solution by finding the exact file from

the parent theme that was doing the override. This file is located at the
base/app/design/frontend/my_company

ALLConverter to 3GP Portable is a software tool with a simple user interface that helps you easily convert files to 3GP. Description: ALLConverter to 3GP Portable is a software tool with a simple user interface that helps you easily convert files to 3GP. Description: Juggle is a tool that lets you juggle sounds. With this free software, you can create a sound mix by dragging and dropping various MP3, WAV and WMA files onto the Juggle window. These will then be mixed together automatically. The software also lets you apply various effects to the sound, e.g. echo, reverb, etc. The results can then be saved as a WAV file. The sounds that you have selected will also be played back by default as audio files. Description:

Praat is an audio program for Windows. It can work as an interface for audio analysis. PRAAT features tools such as: Oscilloscope, Phonogram, Spectrogram, Fourier Transform, Power Spectral Density (PSD) and various filters and effects. It also contains a number of window-based controls such as: window positioning, show/hide and zoom in/out. There are some tutorials available on the Web, including one for free.

Description: ABC Player is a small, but handy program for playing and controlling FLV files (Flash Video). FLV is a format used by a wide variety of flash applications, such as Macromedia Flash Player and Microsoft Silverlight. These applications can be used to play video and audio. However, they are too complex to use as stand-alone players - they always require a host, e.g. a media player. This is the role of FLV Player. It also has the ability to show the Flash movie in a small window with the movie playing in the background.

Description: Visual Voicemail for Windows is a

program that allows you to listen to your voicemail messages online via the Internet. When you receive a voicemail, you will be prompted to press a button to play the message. This button is usually located in the top left corner of the message window. If you would like to listen to your messages at the time they are received, simply add the program to your "favorites" in your web browser. The program will automatically play the message when you receive it. Description: TV and DVD Watch is a program that allows you to watch TV and DVD-quality videos on your computer. It is a successor to the award-winning TVPlay and DVPlay program. With the DVD Watch application, you will be able to play DVD videos from DVD-ROM, DVD-RW, DVD-RAM or CD. You will be able to choose between the NTSC and PAL region. The program is very easy to use and is fast. TV
