7.1 Compatibility issues with Windows 8 and 8.1 At the moment, there are two ways to solve the compatibility problem with Windows 8. 7.1 Using specialized drivers In order for the computer to be able to see the keyboard, you need to find and install special drivers on it. Otherwise, Windows 8 may not see the keyboard and you won't be able to use your computer. You can find them on the website of the manufacturer of the motherboard (motherboard) or your computer. It can be both keyboard and mouse drivers.
