How it works Usage and implementation AutoCAD supports a number of APIs for customization and automation. The most commonly used one is Visual LISP (VLISP) language. Other commonly used languages are Visual Basic for Applications (VBA) and AutoLISP. To support communication with VLISP, AutoCAD uses: AutoLISP VBScript AutoLISP is a programming language for the AutoCAD family of products, which is a dialect of LISP. It is also known as AutoLISP or AutoCAD LISP (ALisp). It is a very basic programming language. The ability to customize AutoCAD's features is extremely limited. There are two main reasons why VLISP is not commonly used. It is both difficult and not very productive to use. The first is its low productivity. Programs written in this language are very slow to execute. This is because in order to make the programs interact with AutoCAD it requires a lot of manual programming to do the necessary checks. Since VLISP is a program designed specifically for AutoCAD, it has the capability to interact with other applications, which was one of the reasons it was created. VBScript is a scripting language, similar to VLISP, but is not designed for a specific AutoCAD program. It is a part of Windows that can be executed from within a browser or from a command-line. Programs written in this language can be used to automate a number of features such as opening files, changing shapes, creating new drawings, and many more. This software is licensed under the terms of the GNU General Public License. AutoLISP AutoLISP was the first development platform for CAD applications. It was created by AutoDesk and later evolved into a proprietary system. AutoLISP was an interpreted language based on the combination of two of the most powerful languages, LISP and C, which was designed to be easy to use by non-programmers. It was originally included in AutoCAD R12. It was first released in 1985. AutoCAD 2000 and AutoCAD XP included both the AutoLISP and VLISP scripting languages. In 2003, AutoLISP was one of the two scripting languages added to AutoCAD, along with Visual Basic for Applications (VBA). AutoLISP has been a1d647c40b
