### What's New In?

Markup Assist for 2D CAD drawing software has a new tab-based view that speeds the process of importing and incorporating feedback. 2D drawing software can now import geometric objects and styles into a drawing. You can easily incorporate feedback from printed paper or PDFs. Multi-CAD: You can now use the same drawing to annotate a component in two different CAD systems. For example, you can now see changes made to an assembly in both AutoCAD LT and AutoCAD. Automatic Conventions: Create an electronic document of the conventions that you have already defined. (video: 1:26 min.) Conventions can be added to drawing parts to be displayed on-screen. You can add new conventions by accessing the options on the ribbon. You can also add conventions to the drawing template (for faster drafting). Also, you can add to all drawings by selecting the "Add conventions to All drawings" option on the Conventions toolbar. Add a shortcut key for "Apply and close all conventions" on the shortcut bar, which allows you to add and apply the conventions from the toolbars or ribbon without closing the drawing. Customize ribbon and menu tabs: You can customize the ribbon and menu tabs that you use. The tabs are now more flexible with many new options. Add a shortcut key for "Create custom ribbon" and "Create custom menu" on the shortcut bar, which allows you to add and customize your ribbon or menu without opening any file. Customize "Additional information" sections: You can customize the appearance of the "Additional information" sections that you see on the drawing canvas. You can select from many types of text styles and make changes to the font, size, and spacing. You can also add a shortcut key to the ribbon for "Apply formatting options" on the shortcut bar, which allows you to make changes without opening any drawing file. Application-specific user interface updates: You can now use the "Options" menu on the ribbon to easily change the design parameters of the drawing that you are viewing. You can select "Open Options" from the "File" menu on the ribbon to open the dialog box that gives you access to the options in the current drawing. You can also
