Today, AutoCAD is available for Apple iOS, macOS, and Android devices, tablets, and desktops. The current version is the year 2019. Read on to learn more about AutoCAD. What is AutoCAD? AutoCAD is a software application that allows architects, engineers, drafters, and other similar professionals to perform their design and drafting tasks more efficiently and effectively. The application consists of two main components: the design software (AutoCAD) and the engineering/modeling software (e.g., Autodesk Revit). The design software generates a model of the completed project. The engineering/modeling software allows the model to be optimized and modified. Autodesk added AutoCAD to its portfolio of CAD software in 1985. Autodesk also offered another version of the software — AutoCAD Add-Ons. Add-Ons contain an additional selection of modules or functions that supplement the base application. Features AutoCAD is one of the best-known CAD applications in the world, with more than 100 million users. AutoCAD 2019, which is the newest release, has 1.5 million users. Through the years, AutoCAD has experienced upgrades in its features, rendering the software more powerful. AutoCAD adds new modules and functions over time. At the end of each year, AutoCAD delivers a major version release. The 2019 release is the fourth major release of AutoCAD since 2010. This release is also the first major release of AutoCAD to feature a fully integrated, combined user interface. Some of the most significant changes in AutoCAD 2019 include: Integrated user interface New real-time editing tools New 3D functionalities New 2D drafting and drawing tools Improved 3D functionality Ability to store and export directly to DWG files Real-time workflow and collaboration features Scalable graphic user interface Connected mobile apps and tablets With the new user interface, you can view, navigate, edit, and manipulate your drawings and models in a single, integrated application. The user interface is very similar to Microsoft Office. As stated earlier, there are two main components of AutoCAD. The base application (AutoCAD) is a non-modifying and non-editing software. The AutoCAD base application has most of the features that you

scripting AutoCAD's scripting language, AutoLISP, provides a variety of mechanisms for programming the environment. AutoLISP is a special variant of LISP for the AutoCAD environment that is compiled for each AutoCAD program version. The Dynamic Input Editor (DIME) is a text editor extension for AutoCAD, and it provides a typeahead popup menu to simplify the process of searching for objects. It also has several features that speed up the creation of editing information (including Drawing View Manager (DVM), Drawing View Filter (DVF), and Drawing View Transform (DVT)). VBA Microsoft VBA (Visual Basic for Applications) is a scripting language for Microsoft Excel, PowerPoint, Visio, and Visio Draw. Since AutoCAD does not have a separate editor, only add-ins can be developed in VBA. As of AutoCAD 2014, AutoCAD VBA support has been deprecated and is being phased out. Visual Basic for Applications (VBA) for AutoCAD is not available for download. The VBA support for AutoCAD was incorporated into the VBA editor, such that VBA for AutoCAD would have the same functionality as AutoCAD VBA. MS Visual LISP MS Visual LISP was a scripting language that was introduced in AutoCAD 2011 for drawing automation and software customization. MS Visual LISP includes a set of commands to implement design tasks such as layout, routing, and programming. Additionally, MS Visual LISP does not have command-line compatibility and does not allow mouse movement. For example, the cursor must move on a grid in order to add objects. MS Visual LISP also has support for complex objects such as 3D models. Despite AutoCAD's other scripting languages (AutoLISP, Visual LISP,.NET and ObjectARX), MS Visual LISP remains the only scripting language that is supported in AutoCAD 2013. Visual LISP Visual LISP (VLISP) is a textual LISP language that was the original scripting language for AutoCAD. VLISP scripts are stored in a .vpl file. AutoCAD released the VLISP language as a proprietary add-on. VLISP is now available as an open-source project, although no longer supported. As of AutoCAD 2009 ca3bfb1094

I'm trying to build an application with multiple Spring Boot apps. I want to have my app.jar, then app2.jar, then app3.jar, etc. Right now I'm just building app.jar. I know I can create a docker-compose file with multiple docker-compose files, one for each service. But when I do that, app.jar doesn't seem to work properly. I read something about making a jar file for each app and copying it to the running container and running each jar file instead. But I'm not sure how to do this or if this is the best approach. Is there a better way to do this?
