This brought an innovative user interface (UI) and a revolutionary plan view, which was an almost-always-visible, single-window view with less "fancy" features like dimensioning, shadows, and drawing connectors, and is now known as the "classical plan view". The plan view has since remained a core component of Autodesk 2D products. AutoCAD 2000 was also the first AutoCAD product to have a free trial. AutoCAD 2000 was also the first version to support 32-bit versions of Windows. AutoCAD 2D and 3D had an equally unique UI. Both products had a radial/grid navigation interface, instead of the later inverted-grid interface, with toolbars on the left of the screen, and were of similar look and feel. AutoCAD 2000 included a system-level WYSIWYG (what you see is what you get) editor for vector and raster drawing. AutoCAD 2D supported a tool for user-created basic shapes, including circles, rectangles, and polygons, the ability to create and edit lines, and a rubber band tool that allowed users to manually move shapes. It included a useful drawing toolkit, making it possible to place drawings on a canvas and change the color, linetype, and linewidth of existing paths, lines, and fills. AutoCAD 2D also included a text toolkit for placing text on paper and the ability to edit text. AutoCAD 2D included a layer system that allowed users to apply attributes such as dimensions to individual layers. It allowed users to ca3bfb1094

"The effects of boredom on the brain are much more serious than we ever thought," says Dr. Ralph Weissbourd, Chief of the Psychology Department of the Center for Pediatric Psychology at Penn State Hershey Medical Center in Hershey, PA. "For a long time, ADHD was perceived as a kind of problem that kids couldn't control. But if they just can't stay motivated, the problem is not them." Kids and Adults with ADHD are more likely to struggle with boredom, and this is something that needs to be addressed. But what is boredom? Boredom, according to Dr. Weissbourd, is more than an absence of motivation and, more importantly, an interruption to one's life. It is really a type of mental illness. "Boredom is like the darker side of ADHD," says Dr. Weissbourd. "When a person is bored, he has his back against the wall, he has nothing to do, and he starts to feel hopeless. He's become aware that the world just doesn't work. That is the beginning of many problems." Dr. Weissbourd says the brain produces an inhibitor chemical called norepinephrine (NE), which decreases when we are bored. "If a person takes NE inhibitors
