What is AutoCAD? In 1987, AutoCAD was awarded the prestigious Computerworld “Product of the Year” award. In 1994, Autodesk introduced AutoCAD for Windows, followed in 1995 by AutoCAD for Windows 95 and AutoCAD for Windows NT. AutoCAD for Mac OS X was introduced in 2010, and in 2011, AutoCAD LT was introduced as a basic drafting application. These days, AutoCAD is still the most popular drafting application on the market. There are over four million users worldwide. It’s used by architects, engineers, designers, construction professionals, photographers, architects, artists, and more. What is the AutoCAD 12.1 version number? AutoCAD 12.1 is the current version number of the application. What is the AutoCAD 2020 release date? AutoCAD 2020 is the newest version of the application. It was released in early September 2019. Who is Autodesk? Autodesk is a company that makes computer-aided design and drafting (CAD) software. Its products include AutoCAD, Dynamo, Inventor, Navisworks, Rhinoceros, and Fusion 360. AutoCAD is among the most popular products of the company. How many people work at Autodesk? The official website of the company says, “Autodesk has more than 41,000 employees located in some 72 countries on six continents.” That’s a huge number of employees, and it’s been growing in recent years. How much does Autodesk earn? According to a study by Payscale, the average salary in the United States is \$124,956. The average salary for an AutoCAD user is \$86,208. In 2019, the average annual salary for AutoCAD users was \$81,724. That’s nearly twice the average annual salary of \$40,470 for all U.S. employees. ***** # CONCLUSION This chapter has covered a number of additional methods for automation in AutoCAD; including providing input to the program and controlling the program's output. This type of automation can be used to automate processes as they are written or to create commands that automate a series of steps. The methods described here can be applied to almost any aspect of the design process, from a simple measurement of a schematic, to the creation of a drawing such as an architectural project. By allowing users to perform a task as a routine process rather than as an occasional manual activity, automation can reduce the number of steps involved in a drawing, such as reducing the number of mouse clicks and keyboard operations required to draw a new portion of a

drawing. It also means that the drawing is more consistent and can be updated more easily, as the routine processes can be performed more often. Automation may also reduce the need for user interaction with the program. With a computer program that can perform a large number of tasks automatically, users are less likely to perform a task manually, but, if they do perform it, the user can be certain of the expected outcome. In this chapter, we have looked at the use of macros and macros-like objects to perform a number of tasks quickly, such as to define simple objects. We have also looked at the use of built-in macros for the automation of more complex procedures. We have looked at the use of modules for the automated process of saving, closing and opening drawings. We have also looked at the automation of commands, such as to perform a given command repeatedly, and to perform a certain command on the first instance of a drawing file. Finally, we have looked at the automation of tools and the automation of processes and procedures, such as the re-arranging of layers in a drawing. This chapter has covered a number of options for automation in AutoCAD. Many of the macros covered in this chapter were originally designed to provide users with alternatives to standard functions. However, as AutoCAD has evolved, many of the more advanced features have been incorporated into the standard commands. While there are no built-in methods for the automation of all possible procedures in the AutoCAD program, the list presented here provides a good starting point for users who wish to automate the design process. * * * ## CHAPTER 9 * * * ##

4. Right-click the "Sample" folder in the installation directory and click on "Open file location". 5. Double-click the 'BootStamp.exe' file. 6. Once opened, follow the prompts and enter the license key. 7. You can now launch Autodesk Autocad. 8. If the "problem" persists, uninstall the Autodesk Autocad. After that, install Autodesk Autocad again. I hope this works out. If you have any problems with this procedure, please contact me. Eduardo Rodriguez

The NSW Government's proposed changes to the Residential Tenancies Act are expected to pass through the NSW Legislative Assembly later today. They have been widely criticised by the landlord group Landlords Australia, which argues that the reforms do not work and will not reduce the rate of so-called rogue landlords. In the lead up to the vote, the Greens have targeted the Government's changes to the Residential Tenancies Act (RTA) which, according to the NSW Liberal Party, will "increase security for renters and help to make landlords responsible for their actions." The State Labor Opposition has said the reforms will not help renters, but have instead been a "kick in the guts" to landlords who have built up a strong residential portfolio. Landlords Australia has argued that the reforms make it harder for landlords to evict tenants for no reason, making life harder for legitimate landlords who want to reduce their exposure to tenants who do not pay. They have also argued that the changes do not address the social issues that can cause people to break their rental agreements, including mental health and financial issues. "It's a poorly thought through piece of legislation that will increase the costs on housing landlords, won't do anything to address the social issues that can cause tenants to break their rental agreements, won't get rid of rogue landlords and doesn't support good renters," the group's chair Leon Carter told BuzzFeed News. "The last thing we want is to give the rights of a renter to a landlord's property." Many of the changes are expected to allow landlords to set a new standard of "reasonable behaviour" that would be applied to all tenants, including cases of property damage
