"Once a modem firmware is hacked, it is a simple process to. by decompiling the modem's firmware to see the serial number.The Freedom From Religion Foundation is working on a letter to the editor of the Superior Telegram newspaper, urging it to refrain from printing letters promoting religion that have appeared over the years. A typical letter published in the newspaper says the Bible reveals the future fate of each person in Scripture. Scripture, however, "is not an inerrant and infallible book," says the Freedom From Religion Foundation. "It is in error on numerous points," it says. "It is also permeated with malevolent doctrines." The FFRF points out that Bible readers are not told to obey the book blindly, nor are they told to disbelieve its content. They are simply "commanded to know its contents, believe its contents and obey its contents." "It is the individual reader who must determine whether biblical teachings are true or false," the FFRF adds. "It cannot be assumed that the teachings of the Bible are true and that the Bible is, therefore, inerrant." The paper has never printed a general disclaimer that acknowledges this, the FFRF points out. "Instead, the paper has promoted the idea that the Bible is inerrant," it says. The paper also prints a long-standing advertisement of the Bible Research Center, a Christian evangelism organization in New Orleans, Louisiana. The Freedom From Religion Foundation is a national state/church watchdog with more than 31,000 nonreligious members throughout the country, including over 800 in Wisconsin and 300 in the Upper Peninsula.All family members of Teresa Cervantes might have to wait to see if they will receive government benefits because of the agency's failure to promptly correct an error that prevented her from receiving benefits, the Department
