* The user interfaces of Photoshop are at first somewhat complex, but usually simple to learn. * Photoshop runs on Windows, Macintosh, and Linux systems. The price for an individual license is between $750 and $1,500. The software is available in several editions to suit different needs and budgets. ## Open source alternatives If there are an increasing number of Photoshop alternatives on the market, none so far have gained a foothold on the market to replace Photoshop. ## Corel Paint Shop Pro Corel Paint Shop Pro, a long-established, powerful, but affordable, professional image editing program, is the closest contender to Photoshop in terms of features and the level of professional support. It is also capable of compiling and exporting multiple images into one large file. Paint Shop Pro uses layers to group related information and is highly visual so that a beginner can get a reasonable grasp of the program. Its functions are all contained in a single program window and are easy to learn. It is a very user-friendly program that is much easier to learn, with comprehensive tutorials online, and at the time of this writing, free to download. The program enables beginners and professionals to create prints, monograph, photo art books, photo greeting cards, letterhead stationery, and other promotional materials at the same cost as Photoshop. ## Picaso Picaso provides a feature-rich, simple to use, yet powerful, alternative to Photoshop. It is a freely available program that is downloaded directly from its website. Picaso has different pricing ranges based on the number of layers

and the frequency of use, and the program is available at no cost for professionals who need very few layers and perform their work once or twice a year, but it does have a small support team. Picaso uses a full-screen, non-modal interface that makes it easy to navigate the program with simple tabs and windows. The program is capable of producing multiple output types. ## Photoshop alternatives The free, web-based, hosted version of Photoshop is useful for Photoshop beginners, but those who would use Photoshop in its full feature set may prefer other programs that use a different interface such as Paint Shop Pro and Picaso, which are discussed later in this chapter. # Photoshop's features Digital image manipulation has seen an explosion in popularity over the last few years, and many people have turned to it in place of traditional

The Panama Canal could be full of robots within 20 years according to military technology experts, and a new acquisition strategy would help America prepare for any kind of attack on the waterway. Designers, engineers and industrial engineers at the Pentagon are currently working to develop "man-machine teams" that will be able to work hand in hand with one another in the future, when the Panama Canal is under attack and the U.S. needs a way to save lives. "It makes a lot of sense that while we're enhancing the security, why not also make the safest way to move people and materials within the canal safer," US Navy Rear Admiral Peter Olson told Military.com this week. Olson is the assistant chief of the Navy's Joint Forces Command and Future Joint Combat System. The Panama Canal is under threat of closure because of the expansion of the Chinese-owned Panama Canal company. Construction was started in February 2014 and is expected to be completed in September 2023. This will allow a third ship passage through the canal and possibly fifth. The Panama Canal has been under pressure from the military as it has the responsibility for the canal's safety as well as being a military part of it. The Defense Department's budget has seen an increase of $300 million in the current fiscal year. The U.S. expects to spend $55 billion over the next 30 years on the canal expansion project, The Wall Street Journal reported. The controversial project to expand the canal will also be likely to increase tension between the U.S. and Mexico. See also: Every bit as bad as you

remember: Russia warns of nuclear missile strikes on NATO if sanctions hurt economy To turn the Canal into a warship the Navy will have to rely on technology, reports Military.com. Engineers in the military have been working with engineers from the US Army Corps of Engineers to develop intelligent drones that could be used to safely clear debris in a canal that is clogged by a ship. There are also robots that can recover people, such as the Serena robot, which uses a combination of sonar and infra-red that is used to find victims in the canal, then is used to pull them to safety. Olson sees the robots as having a pivotal role in saving lives in the Canal. "The robots are an extension of our human security forces and could serve as an adjunct to the human security forces in the canal. That is
