Elements is a powerful tool to create, edit and save high-quality images and videos. I always recommend everyone to have a minimum 2GB of RAM in their computer. But if you're still using an 8GB computer, you should upgrade it to 16GB or even 32GB. It's an expensive decision, but it will definitely worth it. It costs about \$80 for a 32GB USB Drive. ), the Error percentage is closely linked with the dimensionality of the input data vectors. To understand this result more deeply, we take a deeper look into the performance difference. We plot the distribution of prediction results for ACER, OIL over the different number of days in Figure \[pic:hist\\_dist\]. It is clear that a large portion of the errors come from a small portion of the predictions. This observation can be explained by the fact that the nLF model can't learn from the sparse and thin data very well. The most distinctive feature is that the ACER is significantly larger than the OIL. The reason might be that the nLF model has only one forecast target, leading to a larger dispersion of forecast error compared with OIL which has both a data projection target and a scoring target.

	ACER (%)	OIL (%)	ACER (%)	Days
1	0.5	**98.78**	0.46	7
0.4	81.10	**93.84**	10	0.3
