It's not work and easy to win, so if you can see a series of achievement in this game you better stop play this game and start another game until you get achievements because this game is not easy to get achievements in this game. I repeat, not easy to unlock achievements in this game. This game is easy to unlock achievements, you just need some experience. Don't expect a deep game, but rather a fun game. Possibly the most simplistic game I have ever played. This game has many flaws, but if you are willing to be patient and don't mind a rather simple game, it's a heck of a lot of fun. It's a treat for the eye, and an entertaining adventure through a playground of an abandoned laboratory. Just to be very clear, I am no longer developing this game, but if I were to make it now, I would make it a run 'n gun game, like Commander Keen was. Maybe even make it single player only. I feel that a graphical remake would be more fitting for the original creators, but I may put it back on the site if I get enough interest. StorylineWaking up in the desert, you discover that you have some kind of strange powers. You get a signal, and after some digging, you discover that it's called a Decibel Beacon, and it's a device that transmits an unlimited supply of energy. Armed with that newfound power, you team up with a Chinese SWAT team to search for the location of the device, and help them by tracking down whatever group stole it.In the game that follows, you will help them capture one of the members of the group, it's up to you to take down the rest. Features Great controls Graphically beautiful 6 exciting levels Score (Replay) mode available 6 achievements Playable with a controller (Windows, Mac, Linux) Requirements Windows XP, Vista, 7, 8 DirectX 9.0c Installation instructions 1) Unzip the content to your desired location. 2) Run setup.exe and select "I want to activate now" to register the game with the GameCenter. 3) You're done. Notes I am not affiliated with this developer. They released this as an experiment for me. Like I said, I will be hosting it on the site if there's enough interest. "Nu

says: 11-04-2018, 02:11 PM about SW first and 4 years later... It took a mere 97.5 Billion ISK to make a 310 system in Syndicate to 157.9 in SW. That's crazy talk. I'll get shot for that. But people if you have some real info, I'd love to hear it. I'm debating getting the 313 anny and spending the ~50M ISK, why not? That's crazy talk. Wrong in at least two ways 1. What was removed The entire fleet/shipyard was moved to null sec, to create the omega supersec There was only one carrier company (GoonWaffe) and one capital ship company that was originally built in Gameusera, then moved Eventually someone bought the company and moved it back to a non-null sec location and became a Battle station. So not only was there no real transfer of systems, there was also no new ones to be spawned. So if someone has checked the capital ship number, they would find that the 310 system was still there and the cap ship build numbers did not change. The only systems added were the Omega Super Sec and the creation of a whole new constellation of systems, in addition to the changes I mentioned.
