Download.Q: What is the difference between 2x.xsd and 1x.xsd I have an.xsd file that my data providers tell me they need to produce from. That.xsd has 1 file in it, and is 3.3mbs. My coworker has a file with 2.xsd files in it. He told me that 1 of the.xsd files makes up the contents of the other 1 that looks like an extended version of the other one that contains the definition of the other files. I have never heard of.xsd files with more than one.xsd file inside of them before and couldn't find anything on google related to this. Is this correct? Also, he also told me that the.xsd files are the same. The.xsd file that I am using contains the definition of a couple classes in the project. My coworker's file contains the definition of a little bit more than that. A: When viewing an XML schema file in an XML editor, it is normal to see a schema declaration for a schema in the middle of the document. However, in the XSD 1.1 standard, the schema declaration is an optional element that can be omitted. So, either your coworker has omitted this from the document, or the schema is actually embedded in the other XML document. Q: instrumental variable regression - When Instrument variable is uncorrelated with error term Is it possible to use Instrumental variable as a parametric regression? Instrumental Variable Regression: $$y_i = \beta_0 + \beta_1(x_{i1}) + u_{i1} + \epsilon_i$$ Where $y_i$ is the response variable and $\beta_0 + \beta_1(x_{i1})$ is the regression line of the regressor variable $x_{i1}$ Is there a way of evaluating the performance of the Instrument variable on $y_i$ regression as parametric regression? A: Yes, it is absolutely possible to do this. The instrumental variable could be defined as the noise term $u_{i}$ in the regression of $y_{i}$ on $x$
