In docker-compose I deployed django-webapp. Both on their own ip. I set the session storage to redis as follows CACHES = { 'default': { 'BACKEND':'redis_cache.cache.RedisCache', 'LOCATION':'redis://guest:password@ip1:6379/0', } } I can access it through ip1. Now I want to change ip2 to use this redis instance. How can I do this? A: CACHES = { 'default': { 'BACKEND':'redis_cache.cache.RedisCache', 'LOCATION':'redis://guest:password@ip1:6379/0', } } If you want to switch, you will have to change LOCATION attribute. You can retrieve the ip address with the container id (docker inspect my_container_id). Alternatively, you can create a new application that will run on a different docker. Then you will be able to configure your session as you want. Q: c6a93da74d
