I don't want to write the files to the file system and instead it should be downloaded. After searching I found Microsoft.Azure.Services.FileSharing but the documentation for this library is very brief and is incomplete. Could someone please show me an example on how to download a file from Azure file share in ASP.NET MVC 5? Thanks. A: Please see the following code sample, it works well. Client: using (var client = new WebClient()) { var fileContents = client.DownloadString("https://test.blob.core.windows.net/test.txt?sp=rwl"); } Server: using (var reader = new StreamReader(stream)) { File.WriteAllText(@"c:\ile.txt", reader.ReadToEnd()); } 1. Technical Field The present disclosure relates to an electronic ballast for driving a high-pressure discharge lamp, and more particularly, to an electronic ballast capable of preventing a restarting mode from being kept by inverter loss, and a method for restarting a high-pressure discharge lamp. 2. Description of the Related Art A single-lamp high-pressure discharge lamp and a plurality of lamps have been used as lighting apparatuses and optical devices for a liquid crystal display (LCD). Recently, a lighting apparatus using a plurality of lamps has been used for small business or home. A light source apparatus may include a plurality of high-pressure discharge lamps and driving circuits to drive the high-pressure discharge lamps. There are two types of a high-pressure discharge lamp, i.e., a cold cathode type and a hot cathode type. A high-pressure discharge lamp, such as a hot cathode type lamp, is a light source lamp including a transparent spherical and/or cylindrical envelope made of glass or quartz and a pair of electrodes disposed in the envelope. 5ec8ef588b
