Sid Meiers Civilization VI Rise And Fall Update V1 0 0 262-CODEX SKIDROW

I've been using linux (both arch and Ubuntu as primary and Mint Mate as a secondary) for a few years now, but haven't done much of it. I did try Damn Small Linux a few years ago, but the experience wasn't good. Had to dump the ship on occasion to reboot, and even that was occasionally disastrous. With the arch and mint release cycles, it's just easier to apt-get updates and use the internet to get games and software as opposed to downloading and installing it myself. They don't seem to try and lock the system down that hard as far as I can tell, so I figure I can. Before, though, I need to install the Steam client and have all of my steam games installed, including the native linux version of Rise and Fall, before I can run it on Linux. I did try Steam on Mint Mate and it was alright, but having it all in one place would be better. And yes, before you suggest it, I know Steam is coming to Linux. It's one of those cases where everything is the future, but it's still years away, at least in terms of the current official release, so I'd rather hold out and wait for it to come in an actual.deb package or something. So anyways, I'm on Mint Mate on my laptop. I start by navigating into my /home directory to find my Steam folder, as it's in there. I can't say that I use too many Linux programs and still I couldn't find a solution to this error. This is my first post, was kinda unfortunate to not find a proper solution, I don't know what else to do. I am using Ubuntu Linux 16.04 and I am trying to install skidrow due I played Civilization VI and I could not get to start, always getting some errors. I didn't figure out what it was so I needed a new computer, and I bought an AMD Ryzen 3 1300X. So I created a live usb again and there was no longer errors. I am using steam so It would work again, but is there something about steam which I am missing or is it a game issue? 5ec8ef588b
