While the U.S. government has mostly fallen silent since Jan. 31, a peek at a new leak of partial U.S. government smartphone code reveals that the FBI is set to deal with the newly-found little-used feature in iOS. As is, Android P notifies apps of changes to the user interface, a feature that Apple implemented in iOS in the third iOS version, introducing the notch, compacting the home screen, and maintaining a lock screen experience. While these changes were routinely grumbled about since their introduction, they took on a life of their own, turning the highly-loved home screen into the hoard of a hoarder; who, thankfully, eventually makes and larger, more productive use of it. But I have also noticed that keeping the notch-less, home-screen-on-top-of-everything-else Android experience has a lot of users scoffing that the entire Android experience, a phone and a tablet, feels less cohesive and streamlined than the iOS experience. And that feels especially true due to the fact that Android P, which has recently been made publicly available, still lacks many much-talked-about Android features that the iOS users have grown so comfortable with.

We expect the newly designed Photoshop interface to bring the speed, power, and scale of Photoshop to web applications, and will usher in the next wave of innovation and collaboration in the world of digital creativity. As you work on the web, you can use the familiar Photoshop features you know and love—like content-aware tools, retouching tools, layer controls, color selection, and much

more-to transform photos, videos, and other digital assets. You can also use the benefits of Google Cloud services to share your new creations, whether they are web or mobile. With new developer APIs and the introduction of the cloud, the native web features that are fundamental to Photoshop's success will be available in the web version, soon ported to mobile platforms, as well as to the desktop operating system. Photoshop is shifting to a new, dynamic, and multi-device-aware workflow. By enabling web and cloud-based features immediately with these new web-native capabilities, we are opening the door to a limitless future of new creative possibilities. As the web runs faster, higher-resolution imagery, employs modern industry standards, and is distributed widely over the Web, we will move Photoshop to a new era of creative output. The new web-native tools will bring Photoshop to even more platforms than today's desktop and mobile versions. With new developer APIs being introduced, the web version of Photoshop is also supporting the ability to run two instances in parallel in Mac and Windows, so you can use the native Photoshop features on one machine while using the web features on another. If you need access to features that you don't have in the web version of Photoshop, you can use the CC web apps or the Photoshop mobile apps, which you'll soon be able to buy on the Google Play and App Store.
