

Android Device Info Crack Free License Key Download X64 (2022)

Android Device Info [32|64bit]

This tool is a simple application that retrieves information about the Android device that you are currently using for debugging or QA purposes. The application features a simple, yet easy-to-use interface to make the job even easier for you. Before you can get started, it is recommended that you install the ADB in case you do not already have it. In addition, to avoid any potential issues, the developer recommends that you hit the Root button before doing anything else. Once you complete these small steps, you are ready to use the application and learn more about the Android device. To be more precise, the tool can display information such as the device model, build version, screen resolution, screen density, device IMEI, serial number, chipset type, battery info, installed packages or the CPU info. The idea behind the application is to provide a more convenient way to learn information about a given device. Normally, you would need to enter the various Settings section of the mobile device to retrieve this data. Thanks to the tool, now you can find out all important info with just a click of a button directly from the computer. The direct advantage here is that you can save a lot of time and continue working without interruptions or distractions while developing apps for Android. What's New in This Version: Added a root menu. Updated screen resolutions and densities. Fixed bugs and issues. Enjoy! Hint: The application also provides a root menu that will allow you to access more settings and features for your Android device. For example, you can toggle different kinds of connections such as the WiFi, Bluetooth, GPS or USB Debug. In addition, you can also enable or disable a number of components related to apps such as the ones used for location or social media. To do so, simply click on the root button from the application. You can also tap on a specific feature to open the Settings app and access these settings from there. Android Device Info Features: Display information about the Android device that you are currently using for debugging or QA purposes. Look up all the important information with just a few clicks. Supports Android 4.0 and up. Root Support: The application supports rooted devices. To use the application, it is highly recommended that you install the root access through ADB. Installation and Use: To install the application, simply double-click on the ADB in

Android Device Info Crack+

This application allow you to change the default keyboard of your Android Device.It is useful if you have a unique keyboard layout with special keys.
