Slideshow Mode. Similar to when using a graphic tablet, the Adjustment Slider tool provides the possibility of including Slideshow Mode. A nice touch, and a feature that many photographers may appreciate, but not something I would consider essential. Photoshop can handle it without the use of the Adobe Slideshow plug-in, just make sure that you use a version of Photoshop to the latest one. You do not need to neglect workflow if you do not use the Adobe Slideshow plug-in, as you can still use Photoshop and yet be able to export as elegant a slideshow to a significant number of different export options. **Snap Layers.** If you do not like the concept of placing images on top of each other in the Photoshop project, then placing each layer in a separate **book** will be a nice alternative for you. Thus, you can still have access to each of the particular images and they can be easily combined, even when multiple layers are present. This is where the new feature Snap Layers can come in to play. It is bound to certain drawbacks, to be sure. However, it does allow you to layer any images you like, now. The Lightroom's new Snap feature, found under the newly introduced Book panel, is a nice option when it comes to placing images. Linear snapping is evenly placed on the canvas as you drag an image around. It's not the easiest to use feature, and although it offers several image-related options, it is not used to control things like Copyright, Metadata, etc. It is, however, useful as a way to ensure that your images are placed on the final page in an equal fashion. Most commonly, we do not mind each image having the same space on the final page, but if you have a constant page size and only need to produce a few of those pages, then it can be very helpful.
