Apple released their iPad Pro today, including the accessories that go with it. One of these accessories is Apple Pencil. Unlike the old iPad Air that came with the old Apple Pencil, this one has a sleeve for Apple Pencil. The sleeve is long and is designed to protect the Apple Pencil against scratches and get it back in place without too much effort. The sleeve is very zippable and closes with a zipper. It has a black spot on it which is a good way to distinguish it from other iPads. While this may seem like a minor issue, it is a good thing. The back of the iPad Pro, even the old one, looks like something from this year. Instead of the metallic Apple logo, there's an Apple logo on there. There's also a small white button which is the on/off switch. The volume controls are on the right side. The Apple logo on the right is a banner-like logo. The buttons are a lot more plentiful than on the old iPad Air. There's a home button, which is to the left of the volume controls. There's a power button, the volume controls, and the button to lock the device. The volume controls are the same as on the Air, and they are on the right. The power button is a slider button and also works as a volume button. There is no button on the top, as the screen is now flush on top of the device. The trackpad is built into the side of the iPad keyboard cover. Below the hole, there are IR sensors. These sensors are used to wake the iPad Pro from sleep. There's a total of six of them, four at each side. They are used for lifting the cover of the iPad Pro.

Some of the other features in Photoshop are a droplet tool, liquify tools, light and shadow layer, and adjustment layers. The droplet tool is very useful for adding surreal graphics. Liquify tools help you edit and change the shape of an element. Another critical feature of Photoshop is the masking tool. The masking tool allows you to select non-content elements to be hidden. You can even mask out parts of an image and combine a mask with a fill or paint tool. Photoshop also has several new features such as HUD, Smart Objects, Linked Smart Objects, and Content Aware Fill. The HUD provides fast access to the tools that you need the most. Using the Smart Objects in Photoshop gives you a smart way to review or track different objects. It makes your workflow more convenient. Finally, Photoshop's newest feature to handle images is Content Aware Fill. It is intelligent enough to fill the holes of an image. It does its smarts in the background, so you can leave your attention focused on the work rather than having to overwork the image. In addition to these general aspects, the new Photoshop CC has features such as the Clone Stamp tool, Guide Art, crop, and edit features for more efficient workflows. It also has a new Vari-size text tool with more features to create typographic fonts. To make your workflow more seamless, you can now change the number of pixels for the new Grid tool. To learn more about these tools, check the instructables section of the Gallery, and we also have a few ecourses on them, such as Photoshop: Tips and Tricks for Creatives, The Steps of Animating Art, and How to Create Cartoon Airbrush Grids with Photoshop.
