What's New In TTS Voice Recorder?

High-quality recording and playback Record and play back a voice from any source Record any person's voice in any format: voice, text to speech, any format Runs on Windows XP, Vista, 7 and 8 Record and playback voices from many sources Auto-detect and auto-correct "silent" periods Play back in different languages and voices Fast and easy to use Recording in the perfect format Using a microphone or an external sound card Use a built-in microphone or an external microphone or any other device with microphone. Recording files in MP3, WAV, WMA, OGG, APE formats This utility can record and playback many audio formats: MP3, WAV, WMA, OGG and APE. You can record and

playback voices, from any audio source. Record a voice from any source, a microphone, any external sound device. Recording speeds Fast recording speed: - record audio in just 1 second, - can record any audio files, not only voice, - can record voice and other sounds. Low speed: - record audio files of any formats, - can record voices and sound files, - can record both sounds and voices, - automatically determines the best recording speed, - does not need a microphone or an external device. Auto-detect and Auto-correct "Silent" Periods TTS Voice Recorder is an easy-to-use, fast and intelligent recording utility. If you use the TTS Voice Recorder for recording voice, you'll notice some problems. For example, if you use the built-in microphone, you might get lots of noises and not get the best quality. To record voice files, you must use external microphone or other devices. To record voices, the program should be running in the background, and in the perfect silence period, not to interrupt. To make this recording, you should turn off the program that's making noise and the program that plays sounds when it's not in a silence period, otherwise you'll not be able to record the voice. The problem is that it's easy to forget to turn them off, and you'll lose a lot of time. The TTS Voice Recorder solves this problem automatically. If your program is not running, and you are not having a silent period, the TTS Voice Recorder automatically starts to record, but it detects this period and automatically records only the voice. The program does not interrupt any other program. If your program or Internet connection is not a problem, the program starts automatically and you can use other applications or websites while the voice recording is taking place. If the period of silence is not detected, the TTS Voice Recorder just turns off

System Requirements:

Windows 7/Windows 8 (64-bit), 4 GB RAM 2.4 GHz Processor (XP SP2 required) 20 GB available hard drive space DirectX®8 compatible sound card or headphones With a free copy of XNA® Game Studio, the only game you need to create your own adventure game!XNA Game Studio is a new development platform that lets you create games and applications for the Windows platform using C# and XNA, while also taking advantage of a new wave of technology that provides developers with more tools for creating games
