TurboCAD LTE Pro With Registration Code Download [Updated-2022]

Introducing the keyboard shortcut and macro recorder for CAD, KORO. Use it as a simple pad recorder or an automatic shortcuts designer. You can record, edit, delete and assign KORO keyboard shortcuts directly from its rich user interface. With KORO you can get started in minutes and organize your workflow efficiently. The user interface allows to record any combination of commands using the keyboard and assign them to existing or new macros. Macro commands are recorded using the keyboard keys as shortcuts and are presented as a simple text in the right of the recording window. You can choose between keyboard shortcuts or smart buttons (or both) and you can define a hotkey to start the macro recording. There is no need to manually enter any special coding for any function: the user-friendly interface allows to record and edit smart buttons and keyboard shortcuts. For the recording there are a variety of features: such as single, sequential, combinations, action groups and delay times. The recorded macros are saved to a text file which can be edited using a text editor, like for example Notepad. When recording a sequence of commands, it is possible to manually enter the commands (sequential) or to choose the fastest possible sequence (combination). KORO also has a function to automatically find the sequence of the longest possible sequence of commands for a command sequence. Your macros can be edited by simply double-clicking on the button text. If you edit the command text by mistake, you can simply remove the text with Shift-Delete and the macro is replaced by a new command that is copied from the previous command. Macros can be combined with each other and it is possible to create shortcut sequences for all macros on the same command line. Macro sequences can be activated by a hotkey which can be defined by the user. Macros can be saved and loaded for reuse. KORO provides a wizard to help you to generate the MACRO-code for all saved macros. KORO can also export macros as a text file which is easy to edit in a text editor. In order to be able to re-record a macro, a function has been implemented in KORO. Whenever you start the KORO application, the last used macro (including the hotkey) is stored in a temporary macro. When you start KORO again, the current macro is assigned to the newly started application. The temporary macro will be overwritten, so you can use a single macro to both start and record a macro
