Visual Studio LightSwitch is an easy to use drag-and-drop development environment for creating cross-platform business applications that let you easily integrate data, applications, and services. Application Development ToolsLightSwitch helps you accelerate your application development experience by making it faster and easier to build and deploy rich client, mobile, and Web applications. Visual Studio LightSwitch makes it easier to build applications using a drag-and-drop development experience.

It can be installed with Visual Studio 2010 or Visual Studio 2008 or downloaded as a standalone application. Create and publish applications to the desktop, the web, and Windows Azure or SQL Azure. Create an application in a drag-and-drop fashion using Microsoft Office 2010 or Office 2007 and easily extend with the wide variety of business objects that Visual Studio LightSwitch provides such as tables, forms, wizards, reports, business objects, etc. Visual Studio LightSwitch is also extensible with custom data source providers. Simply add a

new provider, code the needed logic, and Visual Studio LightSwitch can use it to query the database for the required data. Business applications can be created for use on the desktop, in a web browser, or in a Windows Azure-based web application. Applications can be packaged as self-contained desktop applications, or as a single assembly that can be deployed to the web. Visual Studio LightSwitch provides a variety of pre-built workflows such as tables, forms, wizards, and reports. It provides an easy to use drag and drop

development experience. For advanced functionality, the workflow designer can be used to create custom workflows. A data source query designer allows developers to quickly add their own custom SQL queries. Business application data can be represented using Excel, or imported directly into the designer, allowing for data-centric design. The designer template designer provides a blank canvas with an extensive set of UI controls to allow developers to create visually appealing applications without the need to write code.

The designer enables developers to build complex, visually appealing business applications. Features Application designer and code-free design. Create and update business objects with data objects. Pretend mode allows for quick prototyping without writing any code. Wizards and code-free workflows. Simplified programming model. Language Bindings – Visual Studio LightSwitch allows language bindings to be added to your code. Support for user interface controls from a variety of .NET languages. Supports authentication and

security
