I believe the potential for additional speed improvement lies in the 64-bit EXE system. Remember that last upgrade to Photoshop CC was delayed, and that Adobe probably didn't want to add 64-bit only software to their lineup. So I propose that the developers at Adobe decide on a specific and definite 64-bit function, and in some way, add that to the existing 32-bit app, and so that it takes advantage of multi-core and RAM settings, and then is expanded. It should expand as an outgrowth of a 64-bit App, with a 64-bit option to run as 64-bit. It would launch as a 32-bit process, and then the 64-bit process within the 64-bit App would be explicitly used, and then expanded out from there. Since the 32-bit process would be the original one, it could live in the RAM and memory. Then, when the 64-bit process is active, the EXE would be deleted. This, of course, would cause Cache problems and usage power problems, but I'm not sure what would happen if the 32-bit process was simply destroyed, or what would happen if the two were still active. So, again, this is just a thought. Even so, I believe that 64-bit processing is the way to go. You really give a thorough review here! I like your use of the battery usage along with the manual sleep timer, and the fact you use the camera you shoot most of the time. I'm not sure if any of us still use 20 year old technology, but battery life is definitely an issue for us also. I like your camera too, don't know if you could keep that one, or if your ever going to replace with a new one.

If you do have a new camera I sense you will use a faster drive. I'm not an expert, but my experience taught me that reading a large file to the camera memory can be slowed down by the media. If this is the case, the smaller the file the better. That being said, if you could keep your current one for

awhile and see how many frames you can get out of it, it'd be worth it to upgrade.

Many of the features Adobe added to Elements Photoshop have either been shown in public tests or by way of Adobe's Creative Cloud beta testers. But the company is now looking to make the in-app sharing tool upgrade slightly for the CC 2018 release. **Organize file types** - Similar to the way the Elements and Premiere Elements software approach file sharing, Adobe seeks to streamline the document-sharing features in Elements Photoshop CC 2018. Instead of creating a web link to a shared Photoshop file, the new system allows users to find and download documents to a specific folder. As one of the first iterations of the new features to ship in the software's beta, it may not currently feature all of the sharing options you'd expect to find in the software from Adobe. **Adobe's Native GPU** - Now that macOS 10.14 has shipped, Adobe has begun the process of incorporating its new native GPU features. Rather than ending up as an additional layer of Rendering Engines, within the code, the rendering engine features are now implemented as part of the Metal API. While the new features may not have been fully baked when Adobe shipped the new software, they're still expected to make their way into Photoshop in the first few months of 2018. Various B2B customers have reported issues with Photoshop Elements with macOS 10.14, but the software is unaffected by the changes. In fact, the release notes for the software make note that the problem with the rendering engine code is fixed for the 2018 release. The issues seen in the Elements software with macOS 10.14 appear to be only related to a different feature in the software that experiences issues in combination with the new Mac operating system.
