Q: In a printf of characters and integers, why do I get "0x1" printed out? I had an exercise which was to write a program that calculates the sum of the primes. The sum should be printed on the screen. I tried to implement this. Here's my code:

```
#include <stdio.h>
#include <string.h>
int main(){
char program[128]; printf(" Enter the name of the program. "); scanf("%s", program); printf(" Enter the number of primes to be summed up. "); scanf("%d", &n); int primes[n], sum; printf(" Enter the list of primes, which is not empty. ");
```

for(int i = 2; i <= c1) Enter the name of the program. a Enter the number of primes to

that this software tool does not provide  
any documentation on how it works,  
which might be confusing for some users.  
PcShield is a password protection

software designed to meet the security requirements of Windows Vista users. The application will remove the account login, password and access rights, thereby preventing any unauthorized users from accessing the computer. The program also offers several options that can be adjusted through its interface. PcShield provides a friendly user interface, allowing its users to control the application from a single window. The interface is minimalistic in design, therefore allowing you to access its features in an easy manner. After installing PcShield, you are required to log in to the program. Once logged in, you will have to define a new account for your computer. The first step involves the selection of a new user account and its parameters. You can use the intuitive interface to specify the name of the new

account, its display name, e-mail address and password. It is also possible to adjust several other user account settings, such as Windows version, the number of accounts that can be created and accessed simultaneously, a description and a list of common categories. The last step is to activate the account by pressing the “Add to taskbar” button. After the account is activated, you can proceed to the next step. PcShield offers various options that can be modified according to the way that you would like to store your sensitive data. You can specify the amount of time that the account is set to be active, the status of the account and several other settings. There is also an option to turn off the account immediately after you have activated it, once you have finished using it. Finally, you can also hide the account from the desktop by

pressing the “Hide icon from desktop” button. Furthermore, it is possible to export your passwords in the form of TXT, HTML or CSV files. The application also includes several integrated security settings that can be adjusted through its interface. You can protect your PcShield software by setting the software to a specific location, locking its interface or limiting its access to specific processes. You can also adjust several settings, such as the display format for the program, the number of passwords that can be generated at a time and the number of passwords that can be stored in the protected folder. Finally, the application can be easily updated by clicking on its “Check for updates” button. PcShield is a reliable tool that offers a variety of security
