By the end of 2016 the Adobe Lightroom Creative Cloud Edition version 5.9.4 was out, promising to enhance and refine the previous 5.8.5 release. Release date was on December 7 and the updates came free of charge. Since the update, we are now able to add a "Smart module" when issuing a metadata change. See the image above. This allows us to quickly and clearly display metadata on our elements when automatically changing it. Previously, we had to issue total metadata changes. Now if we simply rotate something 45°, we are able to rotate the metadata by -45° too; please note that this will be automatically done by Lightroom (and other software) and will require no additional action on our part. However, we can still choose whether or not to mirror the rotation or aspect ratio by using the new Mirror option: With the Smart Sharpen, we can now fine-tune and clean our image. It will be also more accurate and more quickly adjusted for the professional artist; this option will come in handy for, for instance, when we want to adjust our colors after browsing a photo in a way that we think it needs more brightening or sharpening. Please check out the Loupe Sharpening tools: Support for third-party libraries and plugins Automatic synchronization. Excellent for Web applications that need to ideally look the same, no matter how they are displayed on each platform Advanced metadata editing, with schema compliance Advanced editing techniques. Lightroom remains the best digital asset management system available, but is still in need of a few additions to make it truly complete. Firstly, I would love to see a recurring theme option that allows you to have lightroom's asset library assigned to a single PS document. The current situation to me is that you have to manually archive all your PS documents in Lightroom, which takes some time and really doesn't scale very well.

With Lightroom, you can choose to show more photos, adjust the contrast, curves, histogram, and other tools to make your photo look amazing. You can make your photos look stronger using some cool tools as well. In this video, you can see some of the awesome features of Lightroom. The **Adjustment panel** is the panel that is used to change the colors and brightness in a photo (or a video). Here, you can see the adjustment values being changed as well as the preview of the photo. Adobe works hard to make sure that Photoshop will work with all the different kind of monitors and their light spectrum. This interface can be seen in this video. Photoshop is also used for printing, and so it has the support for printers.

'"We're excited about the future of collaboration across Adobe platforms. Consumers expect that they are going to be able to collaborate on the iphone, the ipad or the desktop. The Adobe Portfolio website is only in preview, but it does cover a number of uses cases and aims to be useful for all types of designers and editors, not just illustrators using the software for the first time. Adobe works closely with the Adobe Portfolio team and their news updates give us a pretty good idea of what we can expect.
